HIRELENS AI • SAMPLE JOB DESCRIPTION

Data Analyst

Mid-level | 2–3 years of experience | Bengaluru, India | Full-time

Experience	2–3 years	**Location**	Bengaluru, Karnataka, India
Employment	Full-time	**Work model**	Hybrid (subject to team policy)

About the Role

We are looking for a detail-oriented Data Analyst with 2–3 years of experience to turn business data into clear, actionable insights. You will work with business and technical stakeholders to collect, clean, analyze, and visualize data, build reliable reports and dashboards, and help teams make evidence-based decisions.

Key Responsibilities

- Collect, validate, clean, and transform structured data from multiple sources.
- Write SQL queries to extract, join, aggregate, and analyze data from relational databases.
- Build and maintain dashboards and recurring reports using Power BI or Tableau.
- Use Excel for data analysis, pivot tables, lookups, and quality checks.
- Use Python (Pandas and NumPy) for data cleaning, exploratory analysis, and repeatable workflows where appropriate.
- Identify trends, patterns, anomalies, and key performance indicators (KPIs); explain findings to stakeholders.
- Collaborate with product, operations, finance, and engineering teams to define metrics and reporting requirements.
- Document data definitions, assumptions, query logic, and analysis results.
- Follow data privacy, access-control, and data-quality practices.

Required Qualifications

- 2–3 years of professional experience in data analysis, business intelligence, reporting, or a closely related role.
- Strong SQL skills, including joins, CTEs, aggregations, subqueries, and window functions.
- Hands-on experience with Excel, including pivot tables, lookup functions, conditional formulas, and data validation.
- Experience creating dashboards and reports using Power BI or Tableau.
- Working knowledge of Python for analysis, preferably with Pandas and NumPy.
- Understanding of descriptive statistics, data quality, and exploratory data analysis.
- Ability to communicate findings clearly to technical and non-technical audiences.
- Strong attention to detail and a structured approach to problem-solving.

Preferred Qualifications

- Experience with cloud data platforms or data warehouses such as BigQuery, Snowflake, or Redshift.
- Familiarity with ETL/ELT concepts, scheduled data pipelines, or workflow automation.
- Basic understanding of A/B testing, cohort analysis, or product analytics.
- Experience working with large datasets and optimizing SQL queries.

Key Skills

Core	SQL, Excel, data cleaning, exploratory data analysis, KPI reporting
Visualization	Power BI or Tableau, dashboard design, data storytelling
Programming	Python, Pandas, NumPy
Concepts	Statistics, data quality, relational databases, stakeholder communication

Success Measures (First 90 Days)

- Understand key business metrics, data sources, and reporting expectations.
- Deliver accurate, documented analyses and maintain assigned dashboards.
- Identify at least one practical opportunity to improve reporting quality, clarity, or efficiency.

Fair Hiring Note

Candidates should be assessed on job-related skills, experience, and demonstrable evidence. Personal or demographic characteristics unrelated to the role must not be used in screening or ranking.
